

PLC achieves ISO Certification

As of September, 2012, PLC holds a Certificate of Registration from BSI (British Standards Institution) stating our compliance with ISO 9001:2008.

The ISO 9001 certification is a set of standards for better quality management within any organization. It is rapidly becoming a basic requirement for many of our customers. ISO 9001 is set forward by the International Organization for Standardization and is governed by independent accreditation and certification bodies.

Since everyone at PLC has always taken pride in the high quality of the products, it's nice to be able to promote this with a recognizable certification. Having all of our processes and procedures formally documented and communicated in a consistent manner throughout the organization continues to ensure the highest standards for PLC as we continue to grow.

Our quality policy states:
"PLC employees are committed to executing and improving our Quality Management System in order to satisfy customer requirements by focusing on accuracy of information utilized, the timeliness of activities and the performance of products and services."

All of us at PLC are very proud of this achievement and are committed to continuing our efforts to improve the quality of our work for the benefit of our customers.

PLC introduces the latest product in their expanded line of Lighting Controls

Ron Bryce, retiring after 13 years with PLC

PLC has been honored, for the past 13 years, to have Ron Bryce working with us as our National Sales Manager. Ron, who now runs his PLC office from his home in Ohio, will be retiring at the end of next year.

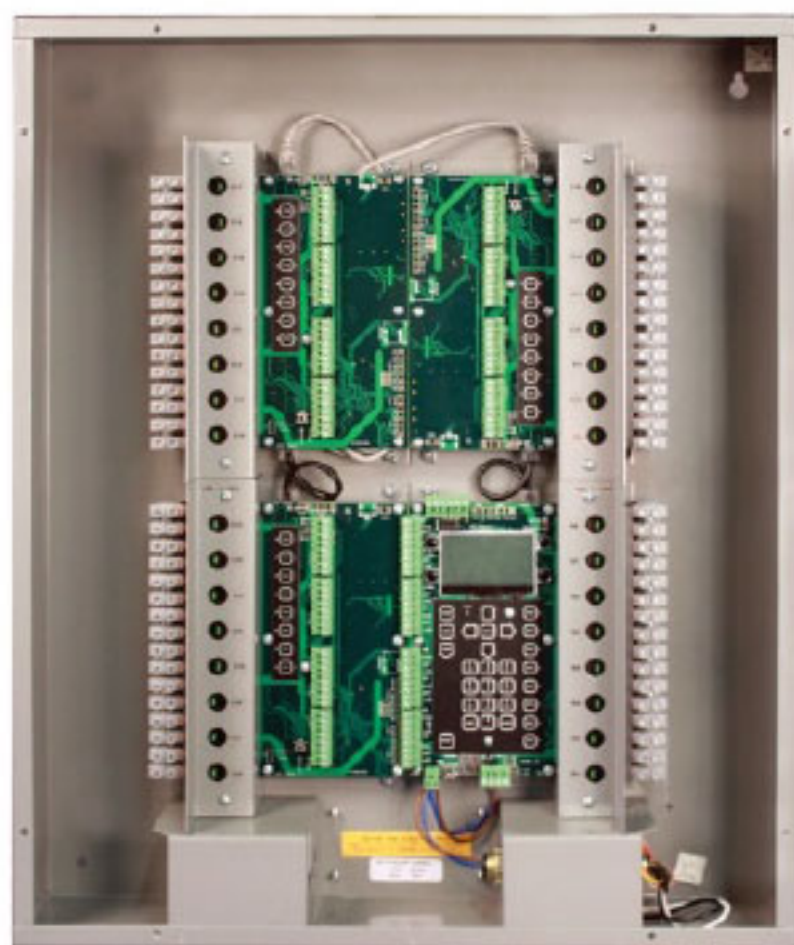

Ron served our country with 2 tours in Vietnam. He also earned an Associates' degree in Marketing and a Bachelor of Arts degree in Business Administration.

Before coming to PLC in 1999, Ron spent 12 years at Square D as an Applications Engineer, where he became an expert in lighting control application. This led him to become a Lighting Rep in the Cleveland area where he met Norm Dittmann, of PLC-Multipoint. It wasn't long after that Ron began working for PLC-Multipoint as National Sales Manager with responsibilities in quotations and management of the sales network.

Ron's duties have become more focused over the past few years to maximize his expertise in quotations, applications and sales management. When asked what Ron enjoys most about his job, he states, *"Taking a project from something on paper to making it real."*

When asked what he sees in the future for PLC, Ron shared his excitement for the Bantam line of products. "This is a strong product line for PLC." Ron also placed great importance on PLC's ISO

Following up on a successful introduction of the [Bantam](#) 8-relay lighting control system, PLC is proud to introduce the [BantamX](#). This feature-loaded system has the flexibility of expanding to as many as 48 relays, all in one enclosure.

Energy efficiency through daylight harvesting is what building owners and developers expect these days. The feature-rich BantamX satisfies that need with the incorporation of 4 analog inputs, perfectly suited for PLC sensors. PLC has been leading the industry with innovative sensor technology. This experience is put to good use in the new BantamX lighting control system.

PLC demonstrating Lighting Control Integration at AHR Tradeshow in Dallas

In January, PLC will be exhibiting at the AHR Tradeshow. You can find us at booth #753. This show, featuring both lighting and operational controls, allows us to promote multiple product divisions of our company. One of the many lighting control products being demonstrated is the [Nebula](#). This unique product features robust and reliable Full 2-Way architecture from Panasonic along with the application knowledge of PLC. With its ease of installation and wide range of communication protocols, the Nebula is a perfect solution for integration with almost any Building Automation System.

Norm Dittmann, PLC President, will be a featured speaker at the show, discussing biogas energy reclamation. He will make his presentation on Tuesday, January 29 at 10:45am. We look forward to seeing you at the show.

certification. He says, "ISO allows us to maintain our focused objectivity and to grow at a controlled pace. We have a good base of technically-oriented people in major positions to continue this growth".

As he nears retirement a year from now, Ron looks forward to spending more time with his family. Ron says he has been very fortunate to have worked for PLC all these years. Management of the company is honest and reputable. Working for Norm Dittmann has been a joy.

Ron Bryce, shown last year at his birthday celebration.
